

**Africa's youth population is not a problem**  
**It is a test of leadership**

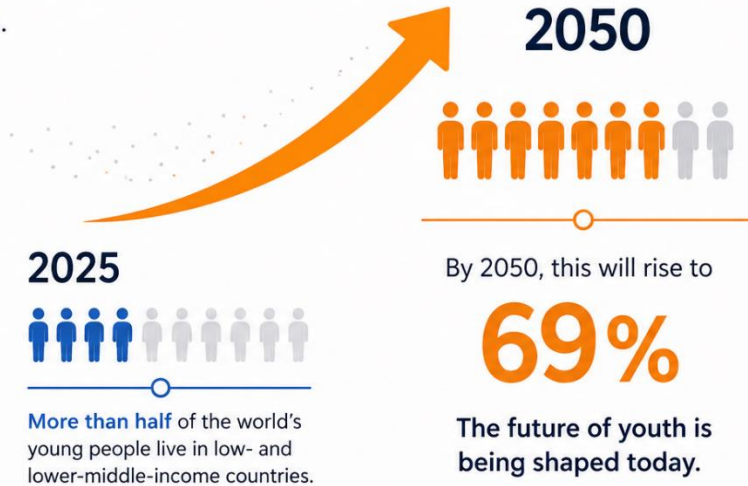

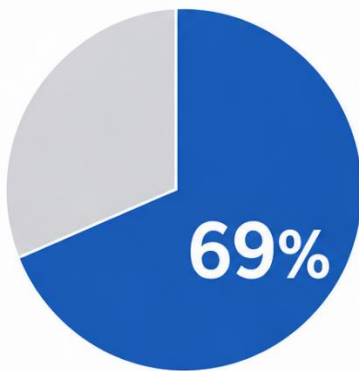

**A new UN DESA report shows that the world's youth future will be increasingly shaped in low- and lower-middle-income countries.**

# By 2050, most of the world's young people will live in countries still fighting poverty, weak services, and limited jobs.

By 2050, 69% of the world's youth will live in **low- and lower-middle-income** countries.

Global youth population (ages 15–24):  
**1.3 billion+**

Our largest generation of youth.

Investing in youth today drives a more equitable and prosperous tomorrow.

**A youth boom becomes a dividend only when young people are healthy, skilled, educated, and productively employed.**

**Girls' education, reproductive health, and economic participation are not side issues. They are national development strategies.**

EDUCATION

HEALTHCARE

DIGITAL SKILLS

JOBS & EMPLOYMENT

GENDER EQUALITY

# Digital skills, STEAM learning, green jobs, and entrepreneurship must become core youth investments, not pilot projects

**Equal potential.**  
**Unequal opportunities.**

Investing in girls and young women unlocks the potential of entire communities and economies.

**What many miss: population growth alone does  
not create progress.  
Institutions, investment, and inclusion do.**

**For Ghana and Africa, the question is urgent:  
Will we prepare young people for the future, or  
leave them to survive it?**

**The next generation does not need sympathy.  
It needs systems that unlock talent.**

**ISIR Ghana believes youth development must be  
practical, inclusive, and future-ready.  
STEAM. Health. Innovation. Development.**
